NORBIN

Full-Floor Hopper Aeration

www.norbin.ca

NorBin is a cutting edge company that is working hard to design real problem-solving solutions for grain storage and grain aeration systems. Our new patent-pending, Full-Floor Hopper Aeration system, is an innovative design that is revolutionizing hopper bottom-bins.

Our design will aerate the whole hopper cone to eliminate wet pockets in your grain bin. This system includes a second, perforated floor inside the hopper. The air is then evenly distributed between the hopper floor and pushed through the perforated floor. As a result, grain bins do not need to be filled to the top for our aeration system to work. Your grain will always receive even airflow. Our airflow charts are available on our website.

The NorBin Full-Floor Hopper Aeration system uses a special perforation design that allows for excellent airflow and works with all sizes of grain and seeds. All grain inside the bin is being aerated by the whole hopper cone, made possible with our new patent-pending aeration system.

Our bolt-together hopper and aeration systems are being built using 100% Galvanized Steel that will last for generations.

With our 40-degree hopper cone, the aeration system is designed so that no grain remains in the bin. This also allows the dust in the air cavity to spill out when the bin is emptied.

We remove the costs and restrictions associated with over-dimensional shipments. Our bolt-together design allows us to ship on standard flat-deck trucks. This allows us to deliver to many remote and hard to access sites.

Specifications

We have several sizes available, with more coming soon.

We will also make custom sizes to suit your needs.

We can make a retrofit Full-Floor Air system for your existing hopper bottom bin.

**The sizes currently available are:
Hopper sizes range from 14ft to 27 ft.**

Sizes coming soon 30ft to 36ft.

The floor perforation size is dented and louvred canola.
