SEEDMASTER

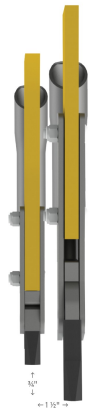

THE ALL NEW INLINE SYSTEM FOR 2021

How it works: our new Inline system uses a new adapter that replaces the conventional seed shank aligning the seed and fertilizer shanks. By doing this, producers now have the option of using a Inline Side Band or a Paired Row tip, simply by removing two bolts and changing the tips.

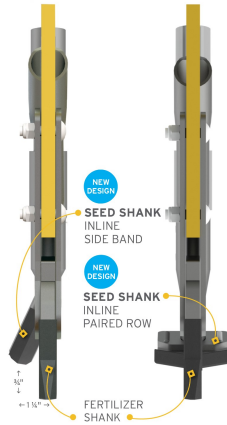

"A dual shank machine poses many challenges when it comes to designing openers. What we came to realize, is that our inline system is a great solution for trash flow issues, seeding adaptability (Paired Row and Side Band), wear, and is very user friendly. The drill was not built in a manner that would accept a quick change inline system so, in order to build the best performing ground engaging system we had to rebuild the row-unit."

OEM OFFSET SYSTEM TRASH VULNERABLE

DUTCH OPENERS INLINE SYSTEM TRASH RESISTANT

Product Highlights

- Inline system clears trash and eliminates the clumping and dumping compared to OEM
- Producers now have options between inline Side Band and Paired Row with a simple change over system
- Alpine tubes available
- Contact your Dutch TM to accommodate Ultra Pro seeding systems
- **3" wide paired row allows for better seed bed utilization**
